

About Seek-it

Seek-it Ltd was established in May 2000 with the remit to be prepared for the commercial, environmental and social impact of the WEEE Directive.

Our initial aim was to evolve safe and environmental friendly methods to recycle '**End of Life**' electronic/electrical equipment (WEEE). In parallel, we developed a commercial IT collection/processing arm with a firm emphasis on tight security.

In 2004 Seek-it won the Small Business Category at the Hampshire Sustainable Business **Awards**. Our IT system also gained a thematic award for use of Innovation & Technology within the waste sector.

Later that year our management system gained **ISO 9001** certification and our **environmental** processes for handling waste were awarded ISO 14001 accreditation.

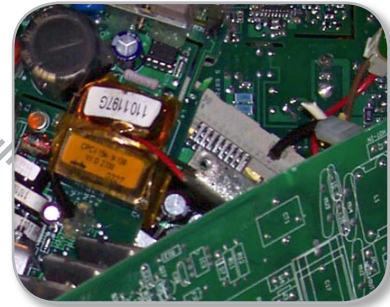

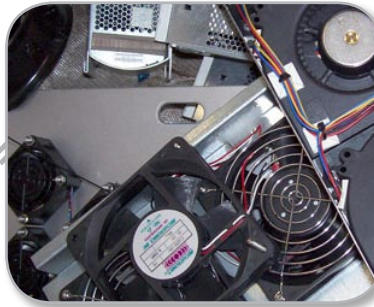

In February 2005 we opened our first facility in Portsmouth, Hampshire dedicated to WEEE treatment. Our waste management licence was amongst the first in the UK to be approved by the **Environment Agency** specifically to treat WEEE.

Since then we have been involved in numerous projects within the WEEE sector which include:

- Systems and processes to **identify** and recycle common plastic types used in the construction of EEE.
- Development of resources to aid the recognition, safe removal and storage of **hazardous** materials used in the manufacture of EEE.
- Segregation, treatment and recording of WEEE from HWRC.
- **Developing** skill sets required for safe, manual demanufacture of WEEE.

Robust accountability, a reliable 'on demand' service and commitment that firmly rejects landfill as a **disposal** route has attracted an impressive, expanding customer list.

At a glance:

- Trading as Privately Owned Limited Company for over 6 years. Hampshire and IOW Sustainable Business Awards, **Winner** Small Business category 2004, 2nd in 2005. Thematic award for Innovation & Technology. SEEDA Sustainable Business Awards Finalists 2004 & 2006.
- Unique award winning IT system custom designed for modern industry requirements. **ISO 9001** & 14001 certification, Health & Safety Infrastructure & monitoring, HR management in place.
