Description

Any quantity or weight
Regulation 24
Regulation 25
Regulation 26
Regulation 27
Regulation 28
Annex II
Data Protection Act
Management
End-user

Producer Compliance Schemes will have to carry out at least one of the following on behalf of its **B2B members**. In some cases due to the diversity of EEE producer requirements, a scheme may decide to become involved in all.

1. Provide **accessible** collection and treatment services for obligated B2B members
2. Audit and approve collection and treatment services arranged by individual **producers** and ensure they are visible to the end users
3. Audit and **approve** commercial contracts between producer and end users, where end user “takes physical and financial responsibility for **treatment** of the WEEE”

Seek-it can assist you in all these cases:

1. We offer **accessible**, ready made collection and treatment services for your obligated B2B members
2. We can supply **approved** collection and treatment services to an individual producer and provide a **visible** ‘take back’ system for end users
3. We can act as an **instant** solution for Producers in the case the end user “takes physical and financial **responsibility** for treatment of the WEEE

We collect and treat most WEEE categories but focus on EEE that contains Annex II materials that must **safely** be removed whole. This speciality service is usually of interest to producers of **medical**, control & monitoring, test and industrial equipment.

EEE collections are solved by our **flexible** service range which caters for individual items from a few **grammes** to a few **tonnes**. Take back by parcels, letters, pallets, containers and vans ensures we provide a complete solution for B2B EEE returns.

Commercial and social **re-use** is carried out in-house. Assessment, PAT testing and rigorous QA ensure **top quality** refurbishment as expected from a company heavily involved in EEE re-use since May 2000.

Treatment is based on manual **demanufacture** to guarantee Annex II and BATTRT compliance, carried out in our purpose built ATF. Aside from removing **hazardous** materials, high levels of material separation are maintained thus ensuring recycling & recovery operations far **exceed** regulation **26** targets.

We have registered with the Environment Agency as an AATF and will be able to issue EEE re-use and WEEE **evidence** in-house.

Complimentary services include secure **demanufacture** with itemised reporting and **enhanced** mass-balanced data. Seek-it also has specialist data destruction solutions to cater for a wide range of magnetic media.
